② 次の英文を読んで、設問に答えよ。[各2点]

Women hear (1) than men and are excellent (2) distinguishing high-pitched sounds. A woman's brain is programmed to hear a baby cry in the night, (3) a father may be unaware of it and sleep (4). If there is a kitten crying in the distance, a woman will hear it. A man, however, with his superior directional skill, can tell her (5) it is.

Women have superior sensitivity to tone changes in voice volume and pitch. This enables them to hear emotional changes in children and adults. Consequently, for every man who can sing in tune, there are eight women who can do it. This (6) [①to explaining / ②a long way / ③ability / ④goes] the women's phrase, 'Don't use that tone of voice with me!' when arguing with men and boys. Most males don't have a clue what she's talking about.

Tests (7) babies show that baby girls respond almost twice as much to a loud sound as boys. This explains why girls are more easily comforted by high-pitched baby talk than boys, and why mothers intuitively sing lullabies to girls, but talk to, or play with, boys. Female hearing advantage contributes significantly to (8) is called 'women's intuition' and is one of the reasons why a woman can (9) between the lines of what people say. Men, however, should not despair. They are excellent at identifying and imitating animal sounds, which would have been a significant advantage for the ancient hunter. Sadly, that's not quite as much use today.
